Antares dryer ATT 025-340

with Tandem Technology

Short Description

Antares dryer with Tandem Technology - an innovative family of dryers for compressed air from 2.5 to 34m³/ min manufactured by Parker HZD (Hiross Zander Division). "Tandem Technology" effectively combines two well known classic drying techniques, working in harmony with one another, to form an optimised and unique compressed air treatment package -Refrigeration Technology/Adsorption Technology. This unique combination enables high-quality compressed air to be provided to the end-user at low energy consumption levels when compared to more traditional adsorption dryers.

Antares Tandem Technology constantly achieves a dew point of -40 °C as standard. To reach such levels of compressed air purity, patented product features and mode of operation contribute to extremely low purge-air requirements. Without the need to alter any of the components in the dryer, **AT-Technology** is able to supply a wide range of compressed air dew points, achieved by simply setting the desired value on the control panel. Dew points above zero, typical of the performance of a refrigeration dryer and dew points below zero (down to -70 °C), which are in the realms of adsorption technology, are easily achievable in an efficient and economical manner.

Untreated, humid compressed air is initially confronted by a pre-filter protecting a traditional, but modified and patented refrigeration circuit, where the majority of the water vapour is effectively removed from the incoming air. The second stage consists of a highly-compact desiccant drying stage, protected before and after by high-performance oil/water-aerosol and particle removal filters, which serves to further reduce the moisture content of the air to a standard dew point of -40 °C. Finally, clean, dry compressed air exits via the patented air/air heat-exchanger to be re-heated and delivered to the air distribution system.

Tried and tested, patent-pending technology, exploiting both PSA (pressure swing adsorption) and TSA (tempera-

ture swing adsorption) brings together an effective and economical solution to meet the needs of the compressed air user. With the addition of a dewpoint dependent switching feature for periods of intermittent load, incorporated into the electronic controller of every **ATT dryer**, initial investment costs are quickly amortised and lifetime costs minimised.

ATT dryers equipped with an optional by-pass are ideally suited to meet the demands of seasonal variation, calling for application flexibility to meet dew points requirements above zero in summer and below zero in winter. In such cases Antares Tandem Technology can be operated solely as a refrigeration-dryer or alternatively "in tandem" with the adsorption stage.

Antares dryer ATT 025-340 with Tandem Technology

The major advantage of Parker Hiross "Antares Tandem Technology" over and above that of other compressed air drying technologies is its contribution to energy-efficiency and overall running-cost reduction. Less overall power consumption, less purge-air consumption, constant and stable outlet-pressure dew points and reduced operating and maintenance costs are the major features of this product range.

Key Applications:

- Food & Beverage
- Surface treatment
- Instrumentation and control
- Automotive
- Materials handling
- Pharmaceutical
- Chemical
- Material forming
- Petrochemical

Key Benefits:

- Lower operating costs vs. traditional heatless and heat-regenerative adsorption dryers (lower purge-air requirement and lower heater consumption).
- Reduced maintenance costs due to less desiccant-fill with extended life time.
- Exemption from periodic vessel inspection.
- Constant dew point performance no peaks above set-point.
- "Dial-a dew point feature" for seasonal operation (By-pass Option)
- Additional energy savings at partial load (Dew-point-Dependent-Switching).
- Compact overall dimensions Small footprint Space saving.

Scope of supply:

- Antares Tandem Technology dryer supplied ready for installation.
- Complete with ISO-12500 validated oil/water-aerosol and particulate GL pre-filters, located prior to the refrigeration circuit, and pre-and post the adsorption stage.
- Dew-point Dependant Switching A standard feature on all models.
- Integral timed-drain on models ATT025-090 integral capacitance-drain on models ATT140-340.

Optional:

- By-pass for seasonal operation (Models ATT060-340).
- 7" colour -Touch Screen Display (Models ATT140-340).

Antares dryer ATT 025-340 with Tandem Technology

Correction factors for ATT model selection

Inlet Temperature (°C)	30	35	40	45	50	55	60	65					
Correction Factor	1.22	1	0.81	0.69	0.59	0.52	0.46	0.4					
Working Pressure ¹ (bar _e)	4	5	6	7	8	9	10	11	12	13	14	15	
Correction Factor	0.62	0.75	0.87	1	1.08	1.2	1.28	1.34	1.4	1.45	1.5	1.54	
Ambient Temperature (°C)	20	25	30	35	40	45	50						
Correction Factor ATT025-040	1.05	1	0.94	0.88	0.81	0.75	0.68						
Correction Factor ATT060-340	1.06	1	0.95	0.90	0.83	0.77	0.72						

Model ATT25 - ATT40 = 16 bar max Model ATT60 - ATT340 = 12 bar max

Example: air flow 500m³/h, operating pressure 8 bar, 40 °C inlet T, 30 °C ambient T, at -40 °C pdp

- 1) Find the correction factor in the table above: 8 bar_o = 1.08; 40 °C inlet = 0.81; 30 °C ambient = 0.95
- 2) Calculate the required capacity: $1.08 \times 0.81 \times 0.95 = 0.83$; $500/0.83 = 602 \text{ m}^3/\text{h}$; $602 / 60 = 10 \text{ m}^3/\text{min}$
- 3) Select the model which corresponds to the calculated capacity. It is acceptable to overload a model by 10 %:
- a. If the requested air flow is intended to be the inlet flow to the dryer, select model ATT090. This model can nominally treat 9.0m³/min inlet
 - flow. (loading it with 10m3/min is acceptable (approx. 10 % more).
- b. If the requested air flow is intended to be the treated air flow at the output of the dryer, than select a larger model ATT140. Model ATT090 can deliver 8.7m³/min at the output, so requiring 10m³/min would be almost 15 % more than its rated performance. In this case the next model must be selected.
- 4) If the requirement is for a different dew-point, the selection procedure does not alter. The required pressure dew-point does not affect the model selection. It impacts only on the total power used by the selected model.

Antares dryer ATT 025-340 with Tandem Technology

Factor to calculate the power consumption of an ATT model at pressure dew-point values which deviate from -40 °C and/or at partial load

Pressure Dew Point (°C)	Refrig. only	+3	3	0	-1	0	-20	-40	-70
Correction Factor	0.39	0.8	8 ().89	0.9	90	0.92	1	1.31
Partial Load	25 %	50 %	75 %	100) %				
Correction Factor	0.66	0.82	0.94	-					
Correction Factor Refrigeration-circuit only ¹	0.52	0.76	0.90						

¹ Only for ATT 140, 260, 340

Example: ATT140 working at -20 °C pdp and loaded with 50 % of its nominal capacity

- 1) Find the correction factor in the table above: $-20 \,^{\circ}\text{C}$ pdp = 0.92; 50 % load = 0.82
- 2) The total power at nominal conditions consumed by model ATT140 (see performance table) is: 2.01 + 2.37= 4.38kW
- 3) Apply the correction factor. The total power consumed at the new conditions is: $4.38 \times 0.92 \times 0.82 = 3.30 \text{kW}$

Example: ATT140 with seasonal "By-pass Option" (Refrigeration-circuit only active), unit loaded at 50%

- 1) Find the correction factor in the table above: Refrigeration-circuit only = 0.39; 50 % load with refrigeration-circuit only = 0.76
- 2) Apply the correction factor to the total power consumed by an ATT140. The new value is: 4.38 x 0.39 x 0.76 = 1.3kW

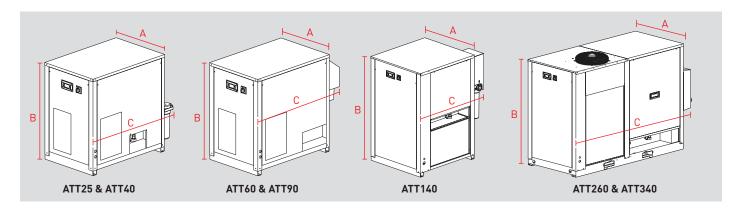

Air quality classes, in accordance with ISO 8573-1:2010

Particulate	Class 2
Humidity (gaseous)	From Class 4 to Class 1 (depending upon sizing and dew point setting)
Total oil contamination	Class 2
